

Why should I choose a pediatrician for my child?

As part of their extensive training, pediatricians are experienced in the physical, emotional and social development of children. Pediatricians understand that children are not just small adults. They understand that symptoms often present differently than adults. Pediatricians are specially trained to recognize the importance of these differences, especially with young children and newborns.

Meet our pediatricians

Martha Holstein, M.D.

Pediatrics & Internal Medicine
